## Sustainability Project Manager

Microsoft Cloud Infrastructure and Operations is the team behind the cloud. MCIO is responsible for delivering over 200 Microsoft web portals, Live and Online Services around the world including infrastructure, security and compliance, operations, globalization, and manageability. Our focus is on smart growth, high efficiency, and delivering a trusted experience to customers and partners worldwide. We are looking for a passionate, high energy individual to help build the network that powers the world's largest online services.

- Develop and project-manage strategies to mitigate the existing and future environmental impact of Microsoft's global datacenter footprint
- Provide environmental technical expertise, guidance and strategy to internal teams responsible for datacenter site selection; building design and construction; energy and water usage; and disposition of materials at end-of-life
- represent the company to external stakeholders and develop external partnerships that serve to scale impactful sustainability initiatives beyond Microsoft, and enhance the company's role as an industry-leader in datacenter sustainability
- Develop and maintain models to track and report multiple datacenter sustainability metrics and progress toward company targets

### Experience

- 5+ years of experience in corporate sustainability, or within a business role responsible for management of sustainability success metrics
- significant professional exposure to green design, construction and certification under existing global green building schemes
- demonstrated success at managing complex initiatives from concept; to testing and buy-in; to execution and evaluation; involving multiple stakeholders with diverse agendas

### Skills

- Deep understanding of corporate sustainability's role in driving business success
- Ability to own and manage complex projects with a high level of independence
- Clear understanding of the green building industry and green building certification schemes
- Strong technical knowledge and analytical capabilities to support data-driven internal business units' development, justification, and achievement of sustainability targets
- Ability to work collaboratively across diverse teams and effectively champion a position within multiple competing priorities
- Ability to effectively communicate and translate complex technical information across multiple audiences, from internal business meetings; to external encounters with government officials, activists and the media; to speaking in front of large audiences

Job # **972602**

Locations **United States, Redmond (WA)**

Job families **Program management (engineering)**

Teams **Cloud and enterprise**

Empower your future.

Feedback

- Growth mindset and a passion to imagine and deploy completely new solutions to solve some of the world's toughest environmental challenges
